excerpt from the elements of moral science theoretical and practical the treatise now offered to the public was written primarily for the use of college and university students in their preparation for the class room it supposes some familiarity with psychological and philosophical studies and a willingness to think closely and earnestly concerning the important questions which relate to man s duties and his moral responsibility in preparing this volume the author has endeavored to meet the wants of those students and readers who though somewhat mature in their philosophical thinking and disciplined in their intellectual habits still require expanded

definitions and abundant illustrations involving more or less of repetition had it been his design simply to state and defend his own views of the theory and practice of morals in a strictly scientific form he would have written a somewhat different book it is not and was not designed to be in form a scholastic treatise although it takes cognizance of both the psychological and metaphysical foundations of ethics and aims to trace all its conclusions to ultimate facts and principles about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

excerpt from the principles of moral science an essay i shall not be surprised to find the success of the attempt questioned and denied by many if not most of those who have spent the best part of their lives in the study of the great catholic writers on morals i admit nay claim that some important conclusions at which i have arrived differ from those of the ordinary hand books ou human acts laws and conscience and are not to be found in any published treatise with which i am acquainted if it were otherwise i should not have thought of writing or publishing very soon after i began to teach moral theology i noticed a considerable difference between the principles of the science as explained in the treatise on human acts and the less general conclusions reached later on when dealing with particular virtues as time advanced this difference seemed to increase rather than diminish and i resolved to try whether i could not formulate the principles so that while perfectly reasonable in them selves and breathing the spirit of the school

they might stand the test of being brought into comparison with all the less general and therefore more easily ascertained conclusions of moral science unless forced by what i deem compelling reasons i have not ventured to advocate a new form of statement the reader must decide for himself whether the reasons that appeal to me so strongly are as conclusive as i deem them those who have begun the study of moral theology or ethics by reading the treatise on human acts may be disposed to think that the treatise in question with which all our hand books commence was developed and put into its present shape before the special treatises that come later on and deal with particular virtues such as charity religion chastity or justice and that these special treatises are practical applications of more general principles previously formulated the reverse is true the treatise on human acts is a synthesis of conclusions previously deduced when dealing with special virtues hence the natural order is to test the more general principles by applying them to the solution of special cases somewhat as the student of nature tests a law by seeing whether it harmonizes with observed facts or even with previously ascertained less general conclusions it may be of course that these less general conclusions are not true or that the facts have not been correctly observed or that the observation has not been sufficiently exhaustive if however you are satisfied that the special conclusions are true while you cannot make them square with the more general principle or law nothing remains but to give this principle or law a new shape so that it may be brought into harmony with the other ascertained results of science about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

excerpt from elements of moral science if men publish a code of laws or a system of rules which they denominate moral science ethics or elements of morality we have a right it is our duty to try that system by the standard which god has given us in him alone all authority over the morals of men is vested and without his will there is no moral law he as our creator has the right to enact laws by which we shall be governed his is an authority which no man can question a right not derived from public opinion or the will of the majority but an inherent right the right of a creator to govern the thing created about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing

unlike some other reproductions of classic texts 1 we have not used ocr optical character recognition as this leads to bad quality books with introduced typos 2 in books where there are images such as portraits maps sketches etc we have endeavoured to keep the quality of these images so they represent accurately the original artefact although occasionally there may be certain imperfections with these old texts we feel they deserve to be made available for future generations to enjoy

in moral science a compendium of ethics alexander bain presents a comprehensive examination of ethical theories interweaving empirical observation with philosophical inquiry this seminal work employs a clear and accessible literary style delineating key concepts such as moral responsibility the nature of pleasure and pain and the development of moral sentiment bain situates his analysis within the context of 19th century utilitarianism drawing upon the ideas of contemporaries while also forging his own path towards a more scientific approach to ethics rooted in psychology and social observation alexander bain 1818 1903 was a pivotal figure in the scottish philosophical tradition greatly influenced by the works of david hume and john stuart mill as a psychologist and philosopher bain placed significant emphasis on the empirical study of human behavior which informed his ethical theories his belief in the importance of social cohesion and moral education reflects the pressing societal questions of his time particularly regarding individual moral agency in an increasingly industrialized world this book is essential for anyone seeking a nuanced understanding of ethics at the intersection of psychology and philosophy bain s rigorous analysis is not only relevant for scholars but also provides a thoughtful framework for contemporary readers grappling with moral questions in today s complex society
